Fluorescent colours

Temporary resin for aesthetic temporary crown and bridge

Very interesting material for opacity and fluorescence of dentine bodies and for translucency of enamel bodies that allow to put in evidence the typical contrast between these two elements in the natural tooth. Enamel bodies also allow to obtain a natural polishing in temporary crowns, similar to the definitive ceramic elements. It can be used both in laboratory with the help of silicone stent or of vacuum forming matrix with the direct technique using a silicone impression or a preformed crown.

MOCK UP KIT

For temporary veneers

TEMPORARY IN 5 MINUTES:

- impression with silicone and clear tray 45 sec.
- impression setting 1 min. 30 sec.
- veneer preparation
- Flow HRi application in stent 30 sec.
- light curing 60 sec.
- final light curing with Ena Seal 60 sec.
